Impact of Data Breaches

Source: IBM 2018 Cost of a Data Breach Study: Global Overview, <https://www.ibm.com/security/data-breach>

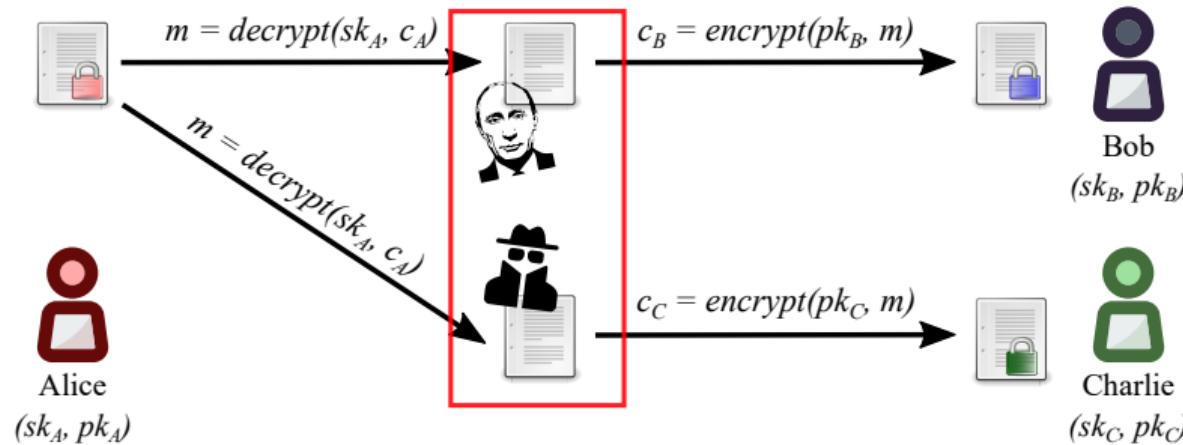

Public Key Encryption (PKE)

Limitations

- Decryption required before sharing
- Not scalable
- Complex access revocation

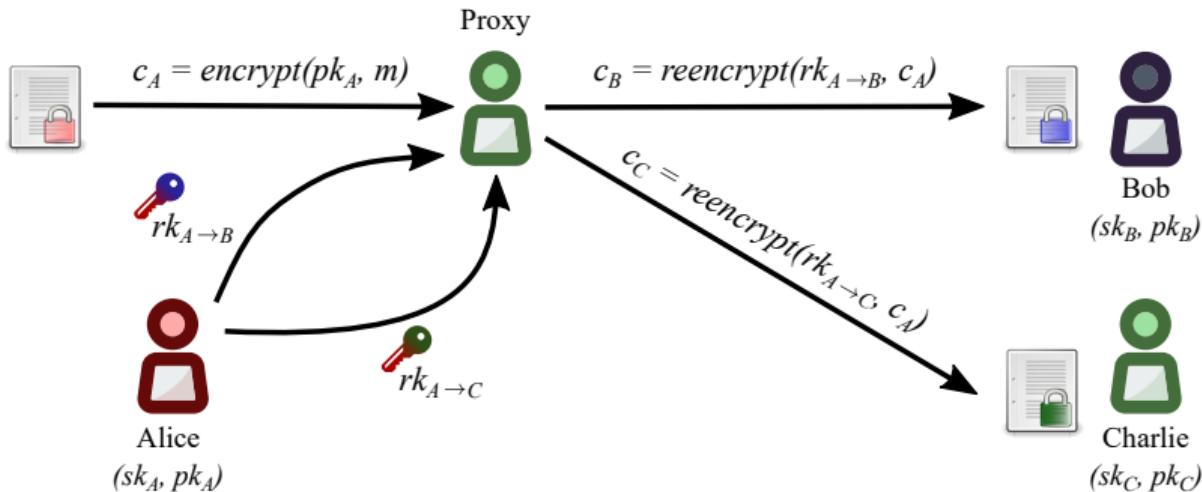

Public Key Encryption (PKE)

Limitations

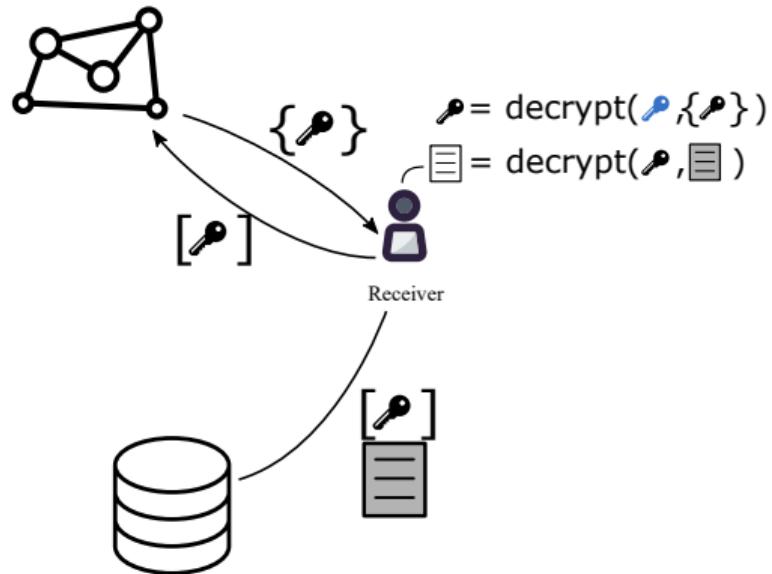

- Decryption required before sharing
- Not scalable
- Complex access revocation

What is proxy re-encryption (PRE)

Solution

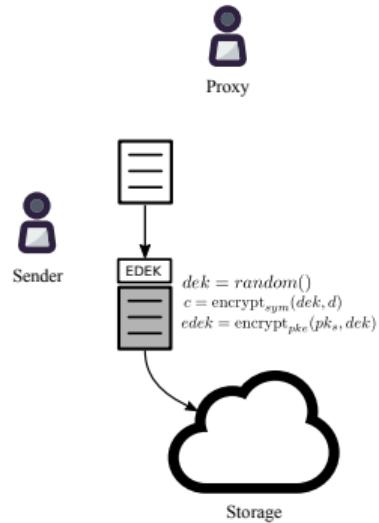

Proxy Re-encryption + KMS

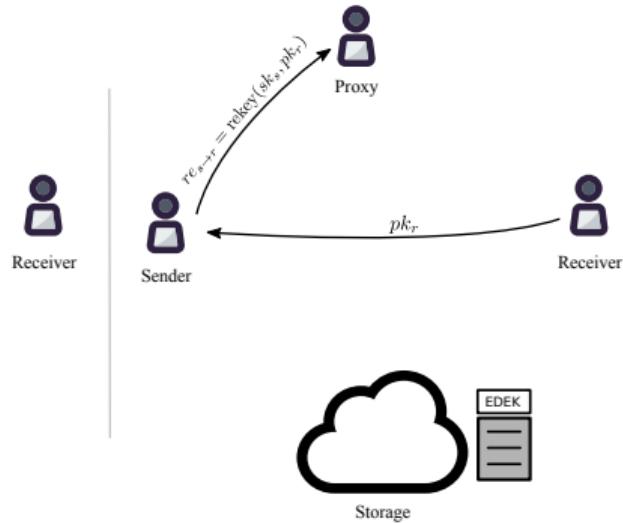

Benefits

- Data not decrypted to facilitate sharing
- Scalable and performant
- Access revocation through re-encryption key deletion

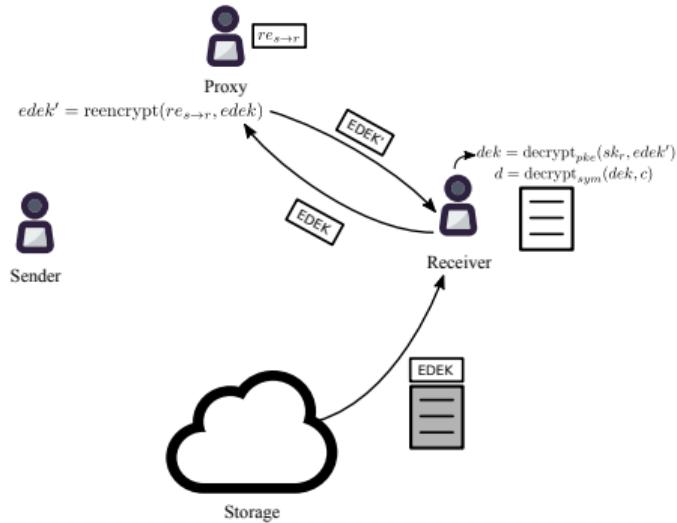

Centralized KMS using PRE

Encryption

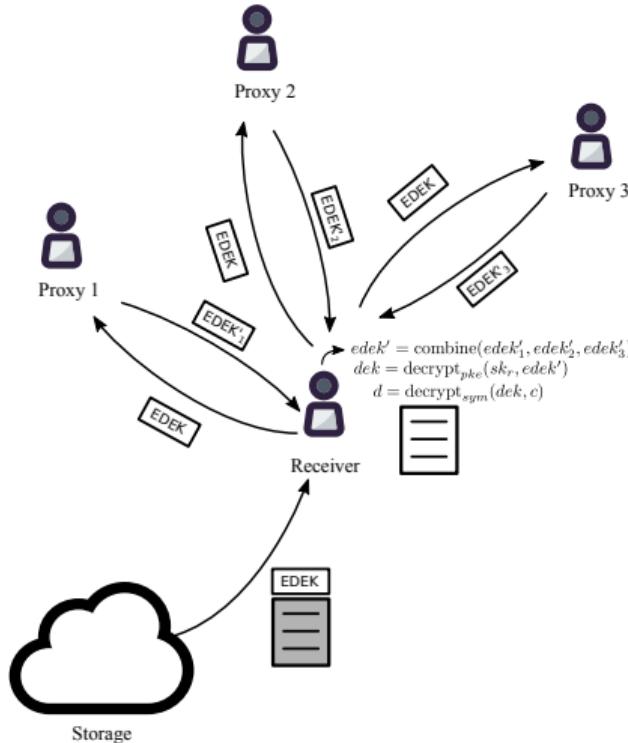

Access Delegation

Decryption

Blockchain-based Decentralized KMS using PRE

Using threshold split-key re-encryption (Umbral)

NuCypher PRE Properties

- Unidirectional
- Single hop
- Non-interactive

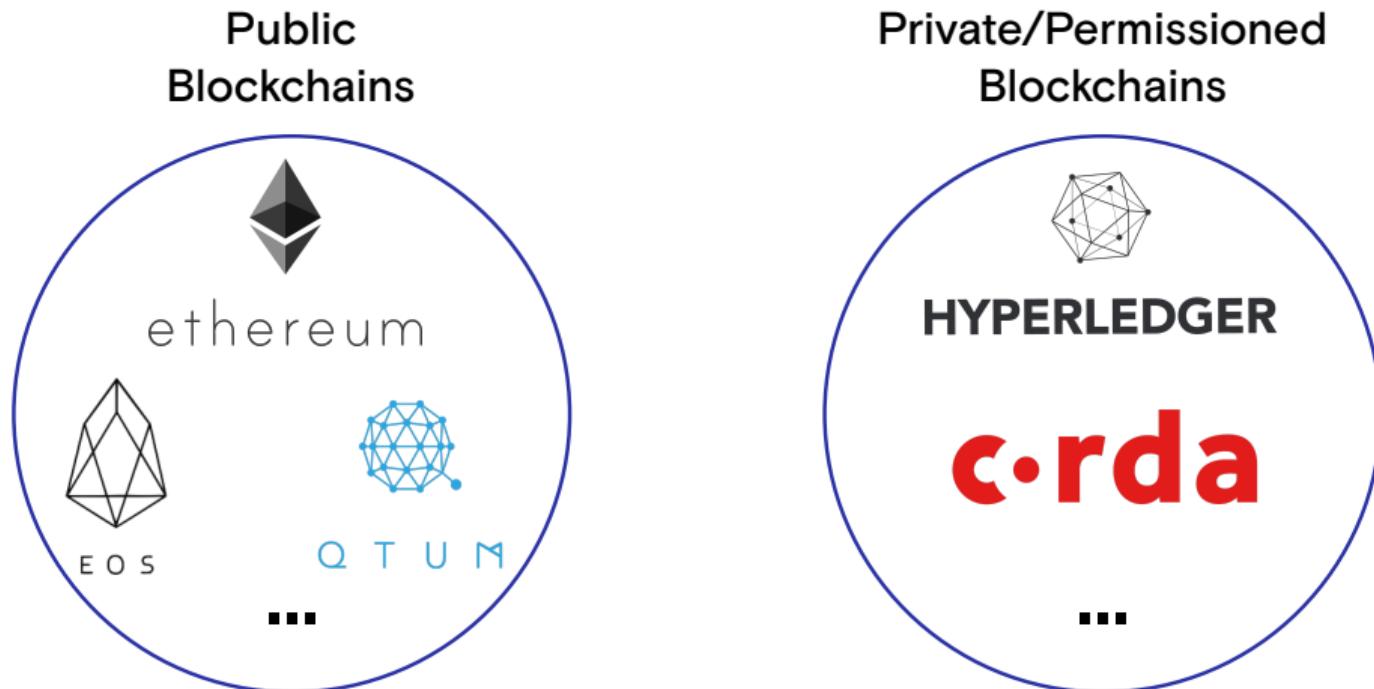

KEM/DEM Approach

- Umbral KEM for threshold re-encryption
- ECIES for key encapsulation
- DEM can be any AE (ChaCha20-Poly1305)

Verification of Correctness

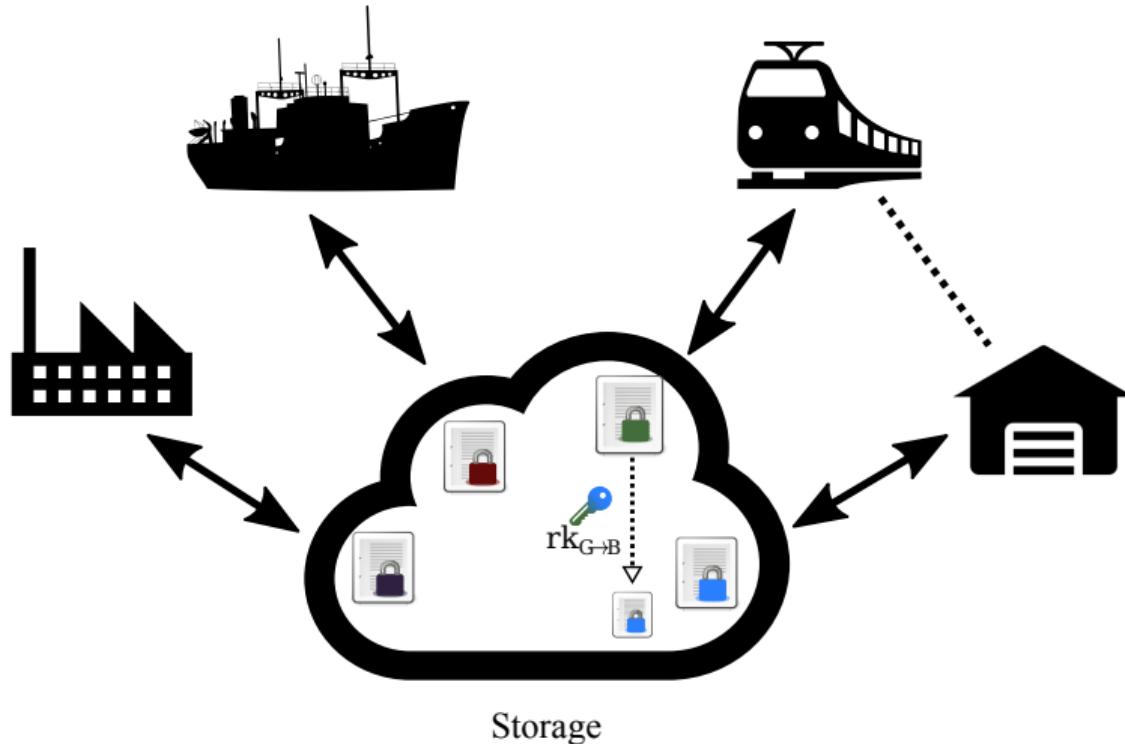

- Verification through non-interactive ZK-proof
- Incentive layer via NU staking token
- Re-encryption validated by challenge protocol

Blockchain & Smart Contract Agnostic

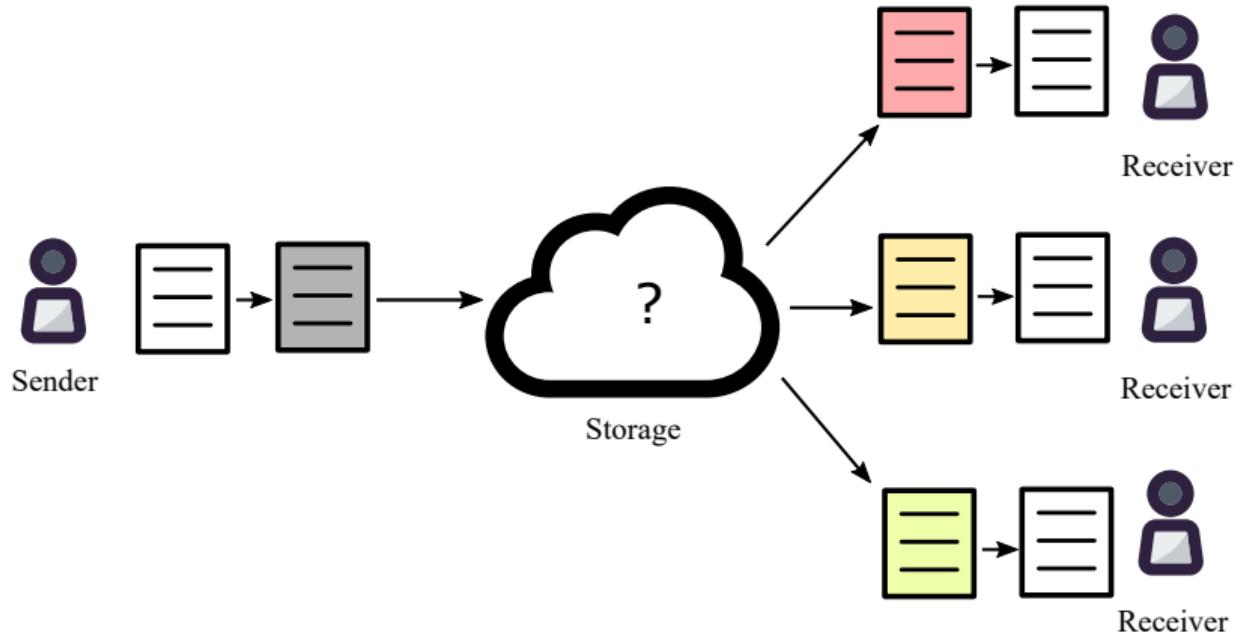

Use Cases

Supply Chain Secure Data Sharing

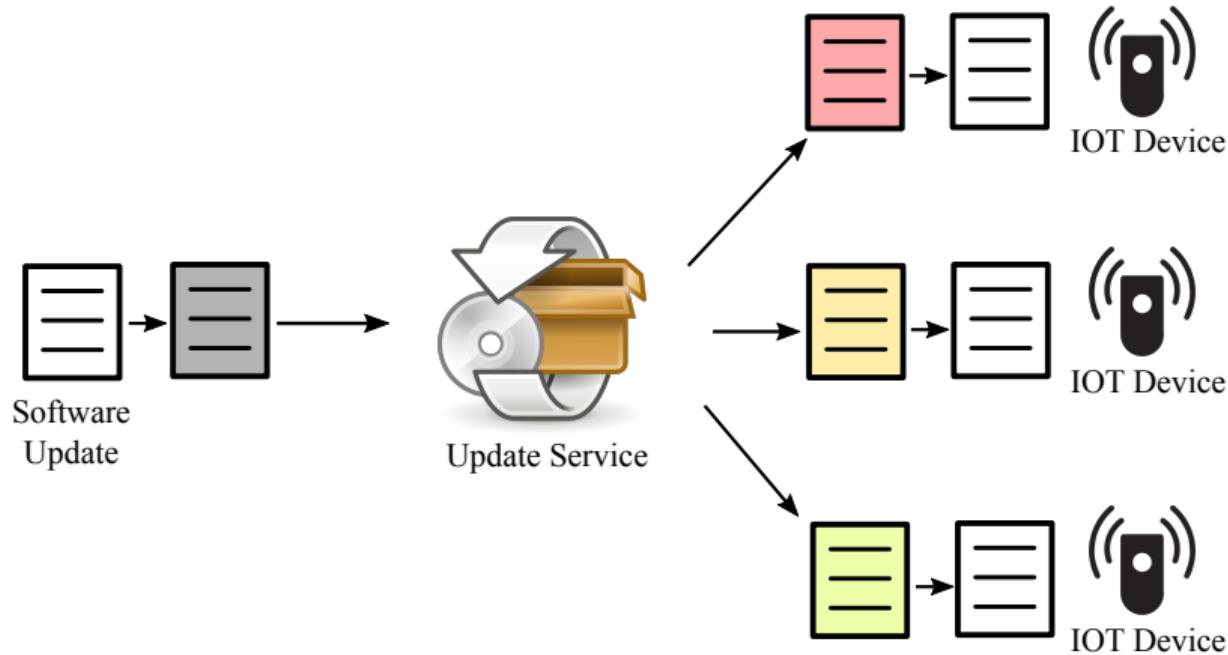

Use Cases

Auditable, Access-Controlled Data Sharing

Use Cases

Scalable, Secure IOT Updates

Early Users

Decentralized Marketplaces

Decentralized Databases

Medical Data Sharing

Internet of Things

SPHĒRITY

Sharing Economy

Genomic Data

Competing Technology

Data Masking and Tokenization

- Less secure for data with underlying patterns
- Reduce the value of data by obfuscating it

Multi-Party Computation (MPC)

- Early Research Stage
- Slow Performance

Fully Homomorphic Encryption (FHE)

- Early Research Stage
- Slow Performance
 - ▶ NuCypher has invested efforts in this area

Appendix: Umbral – Threshold Proxy Re-Encryption

Designed by: David Nuñez, University of Malaga, NICS Lab

- “Umbral” is Spanish for “threshold”
- PRE properties: Unidirectional, single-hop, non-interactive
- It follows a KEM/DEM approach:
 - ▶ UmbralKEM provides the threshold re-encryption capability
 - ▶ The DEM can be any authenticated encryption (currently ChaCha20-Poly1305)
- IND-PRE-CCA security
- Verification of re-encryption correctness through Non-Interactive ZK Proofs
- Code: <https://github.com/nucypher/pyUmbral/>
- Documentation (WIP): <https://github.com/nucypher/umbral-doc>

Appendix: Fully Homomorphic Encryption
